

## LIGATURE RESISTANT FRAMED MIRROR

#FM760

Our ligature resistant framed mirror is designed uniquely for our customers in a size which is more conducive to a full image, 18"x24". The beveled edge of the frame and rounded corners deter ligature while maintaining a sleek aesthetic appearance. Most mirrors of this type are much smaller, making them appear more institutional. The mirror is stainless steel polished to an architectural #8 finish, which is 0% blurred enabling a mirror-like finish comparable to a standard bathroom mirror. The frame is also stainless steel, comes powder coated white, and the unit is front mounted. It should be secured with vandal resistant screws (included) to blocking in the wall and the perimeter sealed with pick free caulk.
